

APPLICATION FLUID

Vinyl application fluids are designed to make the application of pressure sensitive vinyls and decals quick and easy by allowing you time to position your graphics and remove air bubbles prior to adhesion. The application fluid wets the surface, allowing you to slide the graphics until you get the exact placement. No need to worry about the adhesive sticking before you are ready.

And application fluids are great when working with large graphics.

DIRECTIONS

1. Clean surface with rubbing alcohol and let dry.
2. Apply ample amount of application fluid to surface.
3. Peel off backing of graphic and apply application fluid to back of graphic.
4. Place graphic on surface and squeegee in place.
5. Starting in the center of the graphic, squeegee all the fluid out working toward the edge.
6. Allow 30 minutes for adhesive to set before removing transfer tape. See installation instructions for detailed instructions.

TIP

You may reapply application fluid to the graphic transfer tape once the adhesive is set to assist with transfer tape removal.
